

INDEX - FRED explain files.

Most of the FRED explain files are portions of the manual.

[expl fred basics](#)

basic concepts of the FRED language

[expl fred batch](#)

using fred in a batch job

[expl fred buffers](#)

a guide for writing FRED buffers

[expl fred boot](#)

the FRED bootstrap buffer plus explanation

[expl fred breaks](#)

how FRED handles breaks

[expl fred commands](#)

a list of all valid command formats

[expl fred delim](#)

information on FRED delimiters and delimiter levels

[expl fred escapes](#)

stream directives and valid alternate formats for non-alphanumeric characters

[expl fred files](#)

file I/O in FRED

[expl fred history](#)

historical concepts supported by FRED at the moment

[expl fred lib](#)

a brief introduction to programs in the FRED library

[expl fred lines](#)

an explanation of line addresses in FRED

[expl fred patterns](#)

a list of the rules for forming patterns in FRED, plus examples

[expl fred programs](#)

a brief explanation of how to use buffers as programs in FRED

[expl fred specials](#)

special considerations (bugs)

[expl fred stream](#)

stream directives in FRED

[expl fred summary](#)

a terse handbook for the FRED language.

[expl fred tutorial](#)

the beginner's guide to FRED

The following references provide full information about specific FRED commands.

[A - append](#)

[B - buffer](#)

[C - change](#)

[D - delete](#)

[E - define pattern](#)

[F - find information](#)

[G - global](#)

[I - insert](#)

[J - jump](#)

[K - copy](#)

[L - list file](#)

[M - move text](#)

[N - numeric operation](#)

[O - set options](#)

[OB - set number of memory pages](#)

OC - translate one input string to another
OI - input options
OM - monitor execution of buffers
OO - output options
OP - page size
OQ - options for quitting
OR - read permissions option
OS - string matching options
OT - tab stops
OW - line width
P - print line(s).
Q - quit
R - read file
S - substitute
T - test
U - loop until
V - void (undo).
W - write
Y - why?
Z - zap commands
 ZA - append buffer contents
 ZB - sort in reverse order
 ZC - clear questionable flag
 ZD - delete buffer
 ZG - gather output
 ZI - change spaces to tabs
 ZK - copy from one buffer to another
 ZL - convert to lower case
 ZM - move from one buffer to another
 ZO - change tabs to spaces
 ZP - display buffer contents
 ZR - go to buffer containing file
 ZS - sort in ascending order
 ZT - translate characters
 ZU - convert to upper case
 ZV - undo most recent V command
 ZW - append buffer to file
@ - set label
\ - wait
: - display window
" - comment
= - display line address
! - execute system command
- display count register
