

ZW - Write append.

Syntax:

ZW options

Examples:

```
zw  
zwx myfile  
3,5zwb bcdfile
```

Options:

options

include all the options that can be supplied with the w command.

Description:

zw command behaves exactly like the w command (see "[expl fred w](#)"), with one exception: text written by w overwrites the current contents of a file, while text written by zw is appended to the end of the current contents.
